VENTILATION PERFUSION MATCHING

$$\text{Ventilation Perfusion ratio} = \frac{\text{Alveolar ventilation (V)}}{\text{Pulmonary circulation (Q)}}$$

Applied aspect :

Apex has highest oxygen (Has perfusion ↓↓).

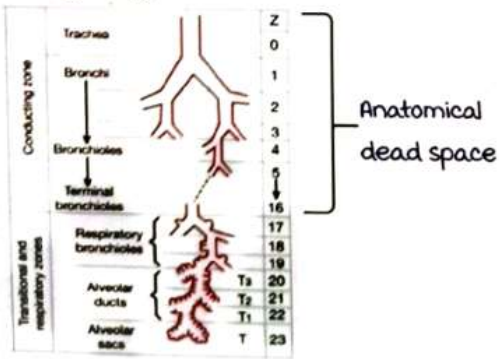

- Significance : mycobacterium tuberculosis infest apex (D/t ↑ O_2).

VENTILATION PERFUSION MISMATCH :

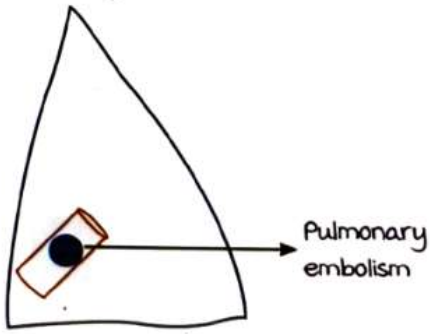

1. **Wasted Ventilation :** (Q = 0).
   - V/Q = Infinity.

Causes :

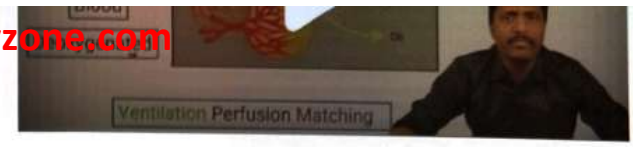

- Physiological :

- Pathological :
